- Concentrate 16oz (474ml)

ODORCIDE®

210 CONCENTRATE

DUMPSTER & CHUTE

Not a mask. Not an enzyme.

Background

Trash dumpsters, garbage cans and areas around them are frequently the source of complaints due to odor. Situations involving unclean and smelly dumpsters can lead to serious health code violations. Odorcide® Dumpster & Chute works through a process of counteraction and absorption to safely, but effectively eliminate the odor. Sold as a concentrate, the product is diluted with water and applied using a variety of sprayer applications.

Uses

- Effectively used to eliminate trash odor generated from hotels, hospitals, restaurants, construction sites, offices, industrial plants and many more.
- Designed to work in tank, trigger and end-of-hose sprayer applications to eliminate odors associated with dumpsters and dumpster pads.
- Can also be used in sprayer applications to eliminate odor in garbage chutes and trash cans.

Directions for Use

Dumpsters

For best results, wait until the dumpster is empty and clean/remove any remaining debris. This will enhance the ability of Odorcide® Dumpster & Chute to get to the source of the odor which is critical to the elimination process. Add 2-4 oz of concentrate to 1 gallon of water. The initial application may require 4 oz/gal while subsequent treatments may only require 2 oz/gal. The dosage can be varied based on the severity of odor. Apply solution using a tank, trigger or end-of-hose sprayer depending on the size of the dumpster. Ensure all walls, corners, the floor and lid are treated to effectively reach the source of the odor.

Dumpster Pad/Area

Clean up trash and debris from around the area before applying Odorcide® Dumpster & Chute. Add 2-4 oz of concentrate to 1 gallon of water and apply using an end-of-hose or tank sprayer. Saturate the area surrounding the dumpster to reach the source of the odor. The concentration may be reduced for subsequent treatments depending on the severity of odor. Repeated treatments are necessary for on going odor prevention and elimination.

Chutes & Trash Cans

As with all applications, best results are achieved by removing trash and debris from affected areas prior to treatment. Add 2-4 oz of concentrate per 1 gallon of water and apply product using a tank or trigger sprayer. Ensure Odorcide® Dumpster & Chute reaches the source of the odor at a concentration equal to or greater than the odor source. For on going control, the concentration can be varied depending on the severity of the odor.

Product Safety

All Thornell products are safe for use on any surface. As with any product, follow the label directions. Contains water, proprietary essential oil blend and preservatives.

Keep out of the reach of children. For external use only.

Cautions

Effectiveness decreased when using with Chlorine solutions. Always spot test for color fastness.
